6: Moser and Tayler E,N-5 (1960-1961) 1967 SQ19 Tucano SQ19

123 622 the *bréo* flame taking coca with two other men. He is silent and has offered little real assistance; I wonder whether he resents our presence here.'

It did seem at times as though Kuarumey resented our presence, and he later had some cause for his suspicions – certainly in his own mind – when events took an unexpected turn. He was a striking man, tall and rather gaunt, with a proud almost arrogant manner. There was no doubt as to who was the head of the *maloca*, nor that we were visitors, fortunate to have his hospitality. We saw little of him during the daytime and it was some time before we learnt he was making a canoe some distance away in the forest.

501 Though the Tukano travel through the forest on hunting expeditions, canoes are used to go further afield, to fish or to trade with other groups. They are a river people as much as a forest people, and like many Amazonian tribes they have evolved their own methods of making canoes.

[171] The Noanamá, we found, dug out and shaped their canoes from solid wood, and it was necessary for them to find very large trees to do this. Many tribes of the southern Amazon use the bark of a tree, like the North American Indian, while some groups of the Guahibo and the Maku living in areas remote from the larger rivers do not use canoes at all. The Tukano, however, shape their canoes by a process of heat-warping.

A tree – a hard type of cedar – had first been felled, then a twenty-foot section was cut and barked, and allowed to lie for several weeks, before [293] Kuarumey started to cut the wood. Each day he went to the clearing, setting up a palm frond to shade himself when the midday sun broke into the clearing, through the gap in the trees overhead.

[412] Using his *azador*, a curved hoe-like blade, and a long stick with a sharp metal end, he first shaped the outside of the log, scraping off the bark. Then he made holes along its length and began to cut out the centre. It was hard work and he would often break off to make himself a cheroot, using the rolled leaf of a palm, while his eldest son continued the work. Once he disappeared in the jungle to set a monkey trap, a ring-snare high in a tree with fruit as the bait.

[224] He worked carefully, feeling the sides of the canoe so as not to make the shell too thin. After several days it was ready, braced with two small stumps to prevent the sides from closing. Then Kuarumey and several Indians from the *maloca* dragged the hull along the forest paths to the river bank nearly a mile away.

Now the canoe was ready to be warped by burning. This could be undertaken only at certain times of the year when there was no risk of rain, for [412] water on the hot wood might split it. Before they obtained iron and steel the Indians used to cut the trees with their stone axes. They would only partly shape the hull and burn out the centre with fire. Now, with the canoe already shaped, the burning was quicker and it would be completed within a day.
